Thanakorn Wannatong

FULLSTACK DEVELOPER

+66918451665 · thanakornWannatong.tonkla@gmail.com

SUMMARY

A sociable and enthusiastic learner who enjoys challenges and continuous growth. Skilled in backend development using Django and PostgreSQL, and frontend implementation with Next.js. Passionate about building efficient, user-focused systems and collaborating in team environments to deliver high-quality results.

TECHNICAL SKILLS

Programming languages : Python ,TypeScript , JavaScript , HTML5 , CSS , Java , C , C++ (Arduino), GO

Frameworks & Libraries: Express.js , Nest.js , Next.js , Django , Tailwind, Bootstrap ,Type ORM , Chart.js, Fiber, GOrm

Database : Mysql , PostgreSQL , MongoDB , SQL Server

Tools : Git , GitHub , Postman , Docker , Sourcetree

Other Skills : Linux Server , MQTT

SOFT SKILLS

Honest and Responsible | Communication | Teamwork | Problem Solving | Adaptability| Fast Learner

EDUCATION

Naresuan University **2022 - Present**

Bachelor of Engineering in Computer Engineering

EXPERIENCE

Full Stack Developer, J Ventures Co.,Ltd. **JAN 2026 - Present**

- Designed and developed **PAH+**, an Earned Wage Access (EWA) and employee welfare platform, delivering both a cross-platform mobile application and a secure back-office administration portal.
- Developed a comprehensive Customer Relationship Management (CRM) system for **The Government Pawnshop**, seamlessly integrating a LINE Official Account (LINE OA) interface with a centralized back-office web application.

Backend Developer Intern , XTEN Technology **April 2025 - June 2025**

- Contributed to developing and maintaining backend systems using Django and PostgreSQL, implementing APIs and database structures for internal and client projects.
- Supported data migration, monitoring, and cleaning processes to improve system accuracy and performance.
- Learned and practiced SQL optimization, API design, and Agile workflow, while assisting in testing and debugging backend features.

Senior Project: The system for testing the temperature and electric current standards of an iron. **2025**

- Designed and implemented a temperature monitoring system for electric irons using a microcontroller to accurately measure and control heat levels.
- Developed a custom gateway application with Electron.js, enabling communication between the computer and the microcontroller via Serial protocol for command transmission and data collection.
- Stored temperature data in a PostgreSQL database, ensuring reliable and structured data management.
- Created a dashboard using Next.js, visualizing temperature trends and device status for effective monitoring and control.

Competition **2024**

- TESA Top Gun Rally – Silver Medal (Web Developer Representative for University Team)
